

JATIN KAPOOR

Aspiring DevOps Engineer

Phone: +91-9599741970 | Email: Jatink9599@gmail.com

LinkedIn: linkedin.com/in/jatin-ka poor1 | Portfolio: jatinkapoor009.github.io

PROFESSIONAL SUMMARY

Aspiring DevOps Engineer with hands-on experience in AWS, Linux, Git, Jenkins, Docker and Terraform through academic and personal projects. Skilled in CI/CD automation, cloud infrastructure, containerization and DevSecOps practices. Passionate about building reliable deployment pipelines and continuously learning modern DevOps technologies.

TECHNICAL SKILLS

Cloud Platform: Amazon Web Services (AWS) — EC2, S3, IAM, VPC, ELB, CloudWatch, Security Group

CI/CD and Automation: Jenkins, GitHub Webhooks, Pipeline Automation, Continuous Integration, Continuous Delivery

Containerization: Docker (Build, Tag, Push, Run), Image Scanning

Infrastructure as Code: Terraform (Basic)

Scripting and Version Control: Shell Scripting, Git, GitHub, Version Control

Monitoring and Observability: AWS CloudWatch (Alarms, Dashboards, Logs, Metrics)

OS and Networking: Linux Ubuntu (Linux Administration, Process Management), (DNS, HTTP/HTTPS, SSH)

WORK EXPERIENCE

DevOps Intern — CloudDevOpsHub

- Assisted in building and maintaining Jenkins CI/CD pipelines for build, test, and deployment stages under senior engineer guidance.
- Helped provision and configure AWS EC2 instances, including basic IAM roles, VPC setup, and security groups for sample deployments.
- Containerized sample applications using Docker and learned to run Trivy scans to identify common image vulnerabilities.
- Wrote basic Bash scripts for routine tasks and helped set up CloudWatch dashboards/alarms for monitoring practice environments.

PROJECTS

AutoDeployX – CI/CD Pipeline using Jenkins, Docker & AWS

github.com/jatinkapoor009/autodeployx_static

Jenkins | GitHub | Docker | AWS EC2 | CloudWatch

- Built a sample CI/CD pipeline using Jenkins and GitHub to automate build and deployment steps for a static application.
- Configured GitHub webhooks to trigger automatic deployments to an EC2 instance on each code push.
- Practiced structuring pipeline stages to keep build and deployment steps organized and repeatable.

Cloud Infrastructure Automation – Terraform

Terraform | AWS EC2 | IAM | VPC | ELB | CloudWatch | Shell Scripting

- Set up basic AWS infrastructure (EC2, IAM, VPC, ELB) using Terraform, to learn Infrastructure as Code concepts instead of manual console setup.
- Wrote simple Shell scripts for basic resource health checks and configured CloudWatch alarms to monitor infrastructure components.
- Practiced writing Terraform configurations in a modular way to understand reusable, consistent environment setups.

EDUCATION

Bachelor of Computer Applications — | MD University, Rohtak | July 2022 – August 2025 |

CERTIFICATIONS

Cloud and DevOps Hands-on Training — CloudDevOpsHub
